

CloudSat Update

Deborah Vane

AIRS Science Team meeting

15 April 2008

Outline:

1. Quick CloudSat overview and project status
2. Standard products
3. CloudSat/AIRS comparisons and complementarity
4. Planned 'enhanced' products
5. Summary

CloudSat: A brief overview and status

CLOUDSAT

A NASA EARTH SYSTEM SCIENCE PATHFINDER MISSION

Hardware continues to operate with nominal performance on 'Side A'

Prime Mission accomplished Feb 08

CloudSat approved to operate through FY11

Two main components of design

1. Formation with the A-Train = a multi-platform observing system

2. The Cloud Profiling Radar (CPR)

- Nadir pointing, 94 GHz radar
- 3.3 μ s pulse \rightarrow 480m vertical res, over-sampled at \sim 240m
- 1.4 km horizontal res.
- Calibration better than 2 dBZ
- Sensitivity \sim -28 dBZ (-31 dBZ)
- Dynamic Range: 80 dB

CloudSat Data Distribution Summary

(As of 1/31/08)

CLOUDSAT

CloudSat

Standard & Enhanced Products

Standard Product ID	Description
Level 1 (Since 2 June 2006)	
1A-AUX	Auxiliary data for navigation altitude assignments, raw CPR data
1B-CPR (RELEASED)	Calibrated radar reflectivities
Level 2 (Since 2 June 2006, Except 2B-GEOPROF-LIDAR)	
2B-GEOPROF (RELEASED)	Cloud geometric profile – includes a cloud mask (with confidence measure), reflectivity (significant echoes), (gas) attenuation correction, and MODIS mask
2B-GEOPROF-LIDAR (IN DEV.)	Merged radar and lidar cloud masks
2B-CLDCLASS (RELEASED)	8 classes of cloud type, including likelihood of mixed phase conditions
2B-TAU (RELEASED)	Cloud optical depth by layer, also effective radius (column)
2B-CWC (RELEASED)	Cloud liquid water content (2B-LWC) Cloud Ice water content (2B-IWC)
2B-FLXHR (RELEASED)	Atmospheric radiative fluxes and heating rates
Level 3 (In Development)	
3B-zonal-mon	Zonally averaged distributions of clouds derived from averaging 2B-geoprof
3B-zonal-sea	

Standard Product ID	Description
Auxiliary Data Products (Since 2 June 2006)	
MODIS-AUX	MODIS radiances and cloud mask products
AN-MODIS	MODIS 1B radiances and 2B products subsetted about the CloudSat footprint
AN-SSF	CERES Single Satellite Footprint (SSF) products matched to CloudSat ground track
AN-state variables	Subset along track of various forecast model state variables, energy fluxes, etc.
Enhanced Products (In Development)	
2B-rain Precipitation (liquid)	Surface rainrate, profiles of liquid water content in precipitation
2B-snow Precipitation (solid)	Profiles of snow particle size distribution parameters and snowfall rate
2B-CC-ICE	Profiles of number concentration, particle size and ice water content
AN-PR	TRMM PR reflectivities and rainfall products matched to CloudSat reflectivity and rainfall products
AN-AMSRE	AMSRE radiances and products matched to
Special Products (available from NRL-Monterey)	
TC-CloudSat	Hurricane overpass dataset

2B-Flxhr

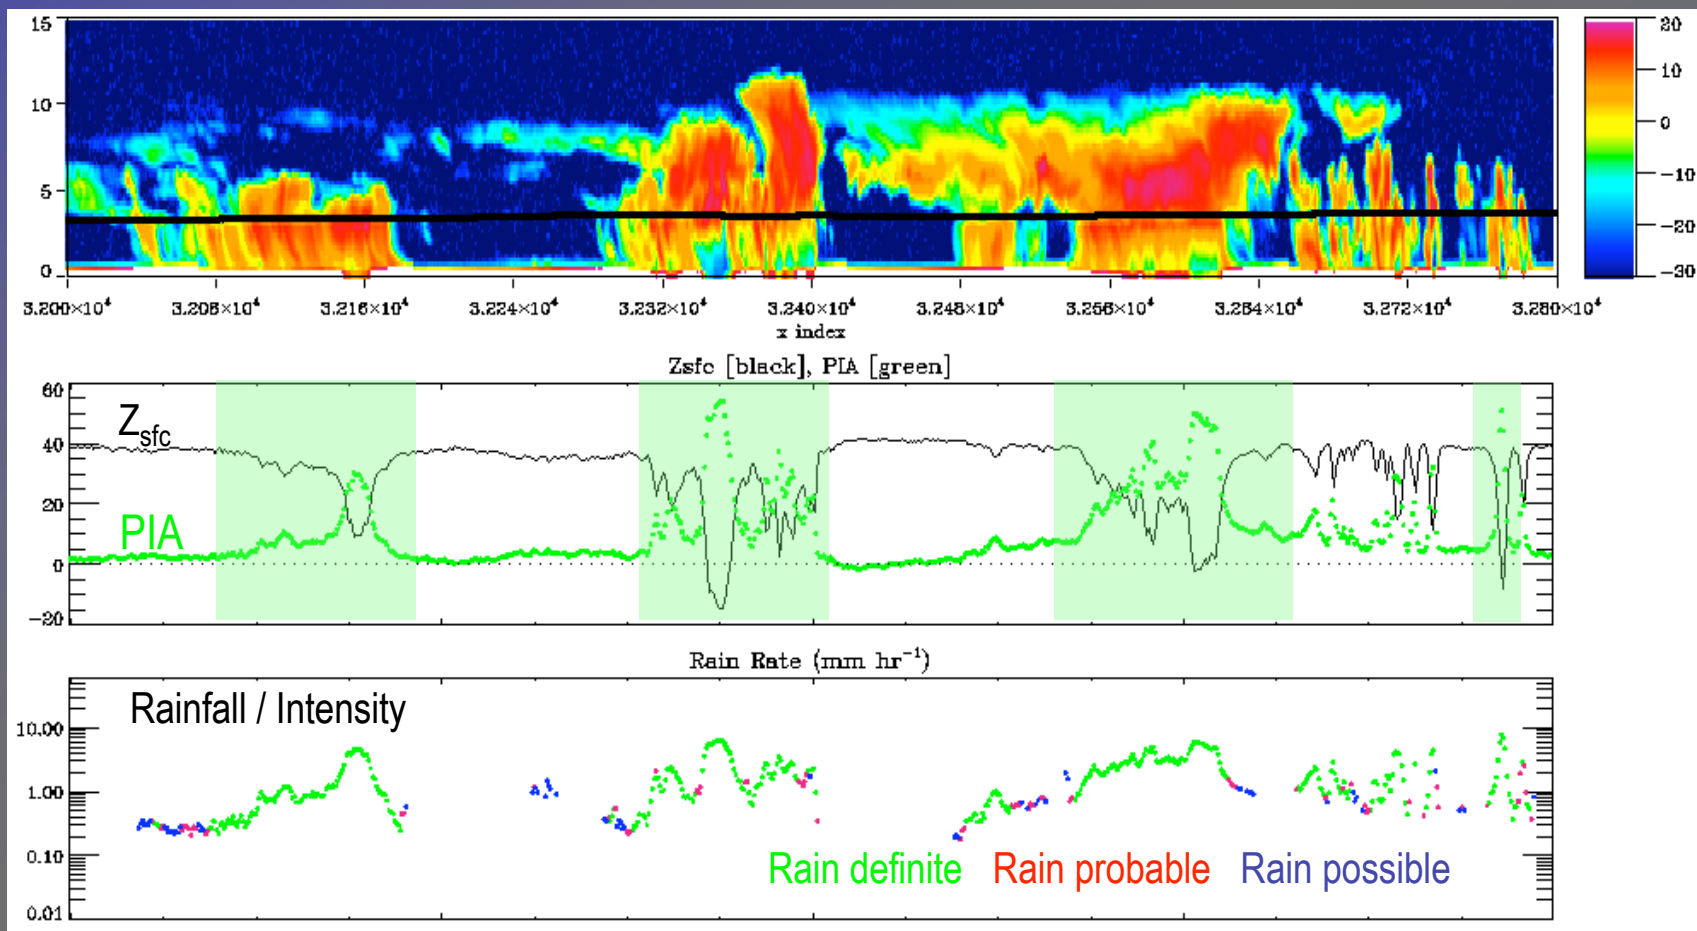

*The 2007-2006 radiation differences could melt $\sim 0.3 \text{ m}$ of sea ice
or increase ocean mixed layer temperatures by $\sim 2.4 \text{ K}$.*

Enhanced product: precipitation occurrence and amount

CLOUDSAT

A NASA EARTH SYSTEM SCIENCE PATHFINDER MISSION

The PIA within a raining column can be estimated by the decrease in surface reflectivity from the clear sky background value: $PIA = Z_{sfc,clear} - Z_{sfc,obs}$

Extremely sensitive detector of rain - ~ 0.02 mm/hr

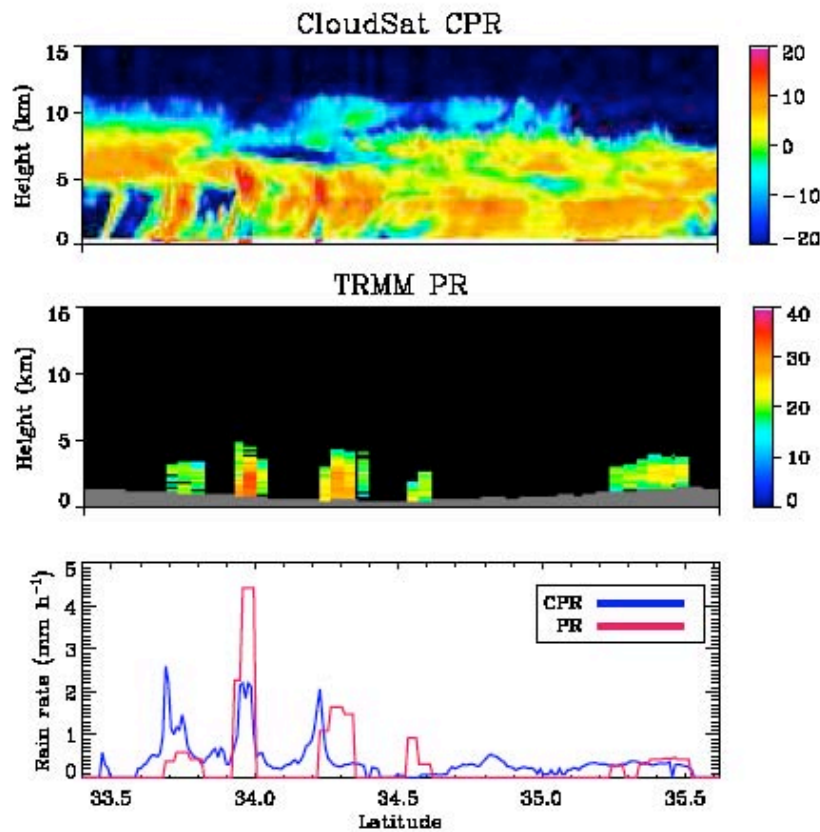

COADS comparison

AIRS relative
humidity

Summary

- CloudSat successfully completed the prime mission and is now in extended mission phase. The flight system is healthy and we are optimistic for operations through at least FY11.
- All Level 2 products, and several co-located, auxiliary datasets, are released and available.
- Level 3 and enhanced products are under development.
- CloudSat observations can be used to determine the precision of AIRS-derived clouds in a wide variety of geophysical conditions, and allow comparisons to be made by cloud type.
 - Given the relatively favorable agreement between CloudSat and AIRS cloud heights, the AIRS swath is useful to supplement the near-nadir climatology from CloudSat.
- The intercomparison of A-Train datasets will lead to more reliable global datasets of cloud structure that will reduce the ambiguity in GCM-satellite comparisons.
